ABOUT US

Our company was established in 1971 with the name ETA Unlimited Company and started working on complete factory establishments and construction works. The name was changed into BETA, in 1979. In the course of time, in addition to construction works, our machinery production department was also developed and a new company named MIS joined to our companies to work on the Purification machinery, Renewable energy systems and Automation subjects.

BETA focused on Villa and Hotel building while MIS focused on automation and nutrition with renewable energy sources, Water and Wastewater Purification Plants mechanical equipment production and mechanical equipment construction subjects.

Lastly, MIS, produces a prototype boat that is providing water from sea water and energy from wind and sun, wastewater purifying, controlled by PC-PLC system, completely self-sufficient, wing sailed, catamaran type boat.

Houses built by BETA-MIS togetherness have the most suitable design for earthquake conditions by using Steel Skeleton, Watermark Floor Covering and Clad front system. Passive heating and energy systems upgraded with Solar cells are arbitrary.

MIS is a leading company in its branch with the experience of 19 years. From small scaled refineries to considerably big city water and wastewater purification systems, MIS achieved great success worldwide. In addition to purification plant productions, MIS continues on developing projects and products for Odor Control Plants with Ozone and Bio-Media, Mass distribution, Reverse Osmose, sea water,well water and wastewater purification with Membrane filters, Wasterwater purification with flow from down to up Anaerobic Mud Blanket method and Biogas assurance, Mud dewatering and drying subjects by following latest technologies.

Separation (dewatering), drying, using solar and wind energy systems unique to our company is used in food, textile, concentrated plants and laboratory systems as well as purification plants.

As MIS and BETA, we will always be with you to fulfill your needs by following global technical resources and using service and product quality support together and wisely
